Subject: RE: HTC and CRU Soil Data Table
Attachments: NFB_Table 9A_SAT Rad Soil Analytical Results.pdf; NFB_Table 8A-1_Rad Soil Analytical Results.pdf

Hi Eric,

I got a clarification yesterday from the lab regarding the radiological analyses for the rinsate samples vs soil samples and it happens that the analytical methods for similar parameters are different for soil/aqueous, hence NA for parameter not analyzed for soil, but for aqueous and vice versa. Sorry I did not give you prior information about this. I have revised the NFB table to correspond with the HTC tables. Please see attached

Please let me know if this clarifies your question.

Thanks.

Thanks Ben. I will use HTC and NFB to describe in my meeting what we will be doing at CRU for now. Lyndsey and I will be working on Canadian Radium next week and will provide you with those values.

I do need to understand what is up with the 21 ingrowth values.

For example, below is excerpt from NFB...all Radium 228 are NA

Radium-226* 2.48 0.689 0.142 0.856 0.232 0.711 0.174 0.962 0.252 1.13 0.281 1.62 0.3 4.43
0.681 1.27 0.291

Radium-228* 15.6 NA NA NA NA NA NA

In the new HTC table....we have 21 day growth and then aqueous only. Ra 228 is NA for the aqueous here. Weren't all of these samples, SAT and ours for all three sites the same analysis?

Eric,

Attached please find the preliminary soil analytical data tables (radiological parameter) for the Holy Trinity Cemetery site. The tables were updated with the EPA's site-specific action levels listed below. We have not received any site-specific action levels for radiological parameters from EPA for the Canadian Radium & Uranium site so we are unable to present you with an updated table.

Please let me know if you have any further questions.

Thanks,

Ben Nwosu

Thanks. Where are we with the HTC Soil data table in comparison to our action levels? The reason I am asking, I have a meeting at 2 PM on Canadian Radium and I wanted to get a similar rough draft comparison to present.

Thanks

Thanks. The paperwork we were just given was just TAL metals correct?

Subject: RE: Hard Copy Data

Good morning Eric,

Attached please find the electronic copies of the validated data for TAL metals, including mercury, for the Niagara Falls Blvd, Holy Trinity Cemetery, and Canadian Radium & Uranium sites. We are yet to provide you with validated data for the radiological parameters. This is due to a request from EPA to give the Li Tungsten project priority over any other projects requiring data validation. We should be able to send you the validated radiological parameters data by end of December.

Please let me know if you have further questions.

Thanks,

Good Morning Ben:

The hard copy validated data you gave us for all three rad sites...we have the electronic copies of those already, correct?
